Subject index for papers in Volume 41

Each index entry below is accompanied by an author's name and a page number; the author index contains the title of the paper and the names of coauthors, if any.

Subject	Author	Page
Algorithms		
A study of the representation of fractal curves by L systems and their equivalences	Alfonseca	727
Fast and effective algorithms for graph partitioning and sparse-matrix ordering	Gupta	171
Improving the memory-system performance of sparse-matrix vector multiplication	Toledo	711
Prefetching and memory system behavior of the SPEC95 benchmark suite	Charney	265
Recursion leads to automatic variable blocking for dense linear-algebra algorithms	Gustavson	737
Analytical models		
Automatic selection of high-order transformations in the IBM XL FORTRAN compilers	Sarkar	233
Dynamic resource management on distributed systems using reconfigurable applications	Moreira	303
NStrace: A bus-driven instruction trace tool for PowerPC microprocessors	Sandon	331
Performance analysis on a CC-NUMA prototype	Kaeli	205
Simulation/evaluation environment for a VLIW processor architecture	Moreno	287
Arithmetic and logical unit design		
A programmer's view of performance monitoring in the PowerPC microprocessor	Levine	345
CMOS floating-point unit for the S/390 Parallel Enterprise Server G4	Schwarz	475
Design methodology for the S/390 Parallel Enterprise Server G4 microprocessors	Shepard	515
Understanding some simple processor-performance limits	Emma	215
Chemistry and chemical engineering		
Chemical amplification resists: History and development within IBM	Ito	69
Lithography beyond light: Microcontact printing with monolayer resists	Biebuyck	159
Negative photoresists for optical lithography	Shaw	81
Circuit and device technology		
Circuit design techniques for the high-performance CMOS IBM S/390 Parallel Enterprise Server G4 microprocessor	Sigal	489
Design methodology for the S/390 Parallel Enterprise Server G4 microprocessors	Shepard	515
CMOS		
A high-frequency custom CMOS S/390 microprocessor	Webb	463
Circuit design techniques for the high-performance CMOS IBM S/390 Parallel Enterprise Server G4 microprocessor	Sigal	489
CMOS floating-point unit for the S/390 Parallel Enterprise Server G4	Schwarz	475
Formal verification made easy	Schlipf	567
Functional verification of the CMOS S/390 Parallel Enterprise Server G4 system	Wile	549
Standard-cell-based design methodology for high-performance support chips	Kick	505
Codes and coding		
A two-step computation of cyclic redundancy code CRC-32 for ATM networks	Glaise	705

Communications and communication networks
A two-step computation of cyclic redundancy code CRC-32 for ATM networks — Glaise 705
Optimization of TCP segment size for file transfer — Bournas 357

Compilers and interpreters
Automatic selection of high-order transformations in the IBM XL FORTRAN compilers — Sarkar 233

Computation
Improving the memory-system performance of sparse-matrix vector multiplication — Toledo 711
Prefetching and memory system behavior of the SPEC95 benchmark suite — Charney 265
Recursion leads to automatic variable blocking for dense linear-algebra algorithms — Gustavson 737

Computational methods
A study of the representation of fractal curves by L systems and their equivalences — Alfonseca 727
Fast and effective algorithms for graph partitioning and sparse-matrix ordering — Gupta 171

Computer organization and design
A high-frequency custom CMOS S/390 microprocessor — Webb 463
Advanced microprocessor test strategy and methodology — Huott 611
Circuit design techniques for the high-performance CMOS IBM S/390 Parallel Enterprise Server G4 microprocessor — Sigal 489
CMOS floating-point unit for the S/390 Parallel Enterprise Server G4 — Schwarz 475
Design methodology for the S/390 Parallel Enterprise Server G4 microprocessors — Shepard 515
Designer-level verification using TIMEDIAG/GENRAND — Wile 581
Formal verification made easy — Schlipf 567
Functional verification of the CMOS S/390 Parallel Enterprise Server G4 system — Wile 549
IBM S/390 Parallel Enterprise Servers G3 and G4 — Rao 397
Performance analysis on a CC-NUMA prototype — Kaeli 205
Run-control and service element code simulation for the S/390 microprocessor — Koerner 577
S/390 CMOS server I/O: The continuing evolution — Gregg 449
S/390 Parallel Enterprise Server Generation 3: A balanced system and cache structure — Doettling 405
Shared-cache clusters in a system with a fully shared memory — Mak 429
SimAPI—A common programming interface for simulation — Hallock 601
Simulation/evaluation environment for a VLIW processor architecture — Moreno 287
Standard-cell-based design methodology for high-performance support chips — Kick 505
The role of two-cycle simulation in the S/390 verification process — Van Huben 593
Understanding some simple processor-performance limits — Emma 215

Cyclic redundancy checking
A two-step computation of cyclic redundancy code CRC-32 for ATM networks — Glaise 705

Design verification
Designer-level verification using TIMEDIAG/GENRAND — Wile 581
Formal verification made easy — Schlipf 567
Functional verification of the CMOS S/390 Parallel Enterprise Server G4 system — Wile 549
NStrace: A bus-driven instruction trace tool for PowerPC microprocessors — Sandon 331
The role of two-cycle simulation in the S/390 verification process — Van Huben 593

Device drivers
Use of the transform exit sequence in printing and as a framework for the solution of complex problems — Mastie 679

Distributed processing
Dynamic resource management on distributed systems using reconfigurable applications — Moreira 303
Performance analysis on a CC-NUMA prototype — Kaeli 205

Electromechanics
An overview of impact printing — Zable 651

Electrophotography
Print-quality enhancement in electrophotographic printers — Stanich 669

Error correction codes
A two-step computation of cyclic redundancy code CRC-32 for ATM networks — Glaise 705

Feature size
Advanced DUV photolithography in a pilot line environment — Ausschnitt 21
Lithography at a wavelength of 193 nm — Rothschild 49
Manufacturing with DUV lithography — Holmes 7
Photoresists for 193-nm lithography — Allen 95
Thin-film imaging: Past, present, prognosis — Seeger 105

Films, polymer
Laser release process to obtain freestanding multilayer metal–polyimide circuits — Doany 151

Fractals
A study of the representation of fractal curves by L systems and their equivalences — Alfonseca 727

Graph theory
Fast and effective algorithms for graph partitioning and sparse-matrix ordering — Gupta 171

Graphics
A study of the representation of fractal curves by L systems and their equivalences — Alfonseca 727

Heuristics
Fast and effective algorithms for graph partitioning and sparse-matrix ordering — Gupta 171

IBM AS/400
Performance analysis on a CC-NUMA prototype — Kaeli 205

IBM S/390 Parallel Enterprise Server
A high-frequency custom CMOS S/390 microprocessor — Webb 463
Advanced microprocessor test strategy and methodology — Huott 611
Circuit design techniques for the high-performance CMOS IBM S/390 Parallel Enterprise Server G4 microprocessor — Sigal 489
CMOS floating-point unit for the S/390 Parallel Enterprise Server G4 — Schwarz 475
Design methodology for the S/390 Parallel Enterprise Server G4 microprocessors — Shepard 515
Designer-level verification using TIMEDIAG/GENRAND — Wile 581
Formal verification made easy — Schlipf 567
Functional verification of the CMOS S/390 Parallel Enterprise Server G4 system — Wile 549
IBM S/390 Parallel Enterprise Servers G3 and G4 — Rao 397
Run-control and service element code simulation for the S/390 microprocessor — Koerner 577
S/390 CMOS server I/O: The continuing evolution — Gregg 449
S/390 Parallel Enterprise Server Generation 3: A balanced system and cache structure — Doettling 405
Shared-cache clusters in a system with a fully shared memory — Mak 429
SimAPI—A common programming interface for simulation — Hallock 601
Standard-cell-based design methodology for high-performance support chips — Kick 505
The role of two-cycle simulation in the S/390 verification process — Van Huben 593

Imaging technology
Development and application of a new tool for lithographic mask evaluation, the stepper equivalent Aerial Image Measurement System, AIMS — Budd 119
Impact of lens aberrations on optical lithography — Brunner 57
Thin-film imaging: Past, present, prognosis — Seeger 105

Instrumentation
Development and application of a new tool for lithographic mask evaluation, the stepper equivalent Aerial Image Measurement System, AIMS — Budd 119
Large-field scanning laser ablation system — Doany 131
Masks for laser ablation technology: New requirements and challenges — Speidell 143

Integrated circuit design
A high-frequency custom CMOS S/390 microprocessor — Webb 463
Circuit design techniques for the high-performance CMOS IBM S/390 Parallel Enterprise Server G4 microprocessor — Sigal 489
CMOS floating-point unit for the S/390 Parallel Enterprise Server G4 — Schwarz 475
Standard-cell-based design methodology for high-performance support chips — Kick 505

Interfaces
A programmer's view of performance monitoring in the PowerPC microprocessor — Levine 345
Run-control and service element code simulation for the S/390 microprocessor — Koerner 577
SimAPI—A common programming interface for simulation — Hallock 601

I/O design
S/390 CMOS server I/O: The continuing evolution — Gregg 449

Large-scale computing
A high-frequency custom CMOS S/390 microprocessor — Webb 463
Advanced microprocessor test strategy and methodology — Huott 611
Circuit design techniques for the high-performance CMOS IBM S/390 Parallel Enterprise Server G4 microprocessor — Sigal 489
CMOS floating-point unit for the S/390 Parallel Enterprise Server G4 — Schwarz 475
Design methodology for the S/390 Parallel Enterprise Server G4 microprocessors — Shepard 515
Designer-level verification using TIMEDIAG/GENRAND — Wile 581
Formal verification made easy — Schlipf 567
Functional verification of the CMOS S/390 Parallel Enterprise Server G4 system — Wile 549
IBM S/390 Parallel Enterprise Servers G3 and G4 — Rao 397
S/390 CMOS server I/O: The continuing evolution — Gregg 449
S/390 Parallel Enterprise Server Generation 3: A balanced system and cache structure — Doettling 405
Shared-cache clusters in a system with a fully shared memory — Mak 429
SimAPI—A common programming interface for simulation — Hallock 601
Standard-cell-based design methodology for high-performance support chips — Kick 505
The role of two-cycle simulation in the S/390 verification process — Van Huben 593

Laser ablation
Large-field scanning laser ablation system — Doany 131

Laser release process to obtain freestanding multilayer metal–polyimide circuits — Doany 151
Masks for laser ablation technology: New requirements and challenges — Speidell 143

Lasers
Large-field scanning laser ablation system — Doany 131
Laser release process to obtain freestanding multilayer metal–polyimide circuits — Doany 151
Lithography at a wavelength of 193 nm — Rothschild 49
Masks for laser ablation technology: New requirements and challenges — Speidell 143

Lens design
High-numerical-aperture optical designs — Singh 39

Lithography
Advanced DUV photolithography in a pilot line environment — Ausschnitt 21
Chemical amplification resists: History and development within IBM — Ito 69
Development and application of a new tool for lithographic mask evaluation, the stepper equivalent Aerial Image Measurement System, AIMS — Budd 119
High-numerical-aperture optical designs — Singh 39
Impact of lens aberrations on optical lithography — Brunner 57
Large-field scanning laser ablation system — Doany 131
Laser release process to obtain freestanding multilayer metal–polyimide circuits — Doany 151
Lithography at a wavelength of 193 nm — Rothschild 49
Lithography beyond light: Microcontact printing with monolayer resists — Biebuyck 159
Manufacturing with DUV lithography — Holmes 7
Masks for laser ablation technology: New requirements and challenges — Speidell 143
Negative photoresists for optical lithography — Shaw 81
Optical lithography: Introduction — Chiu 3
Photoresists for 193-nm lithography — Allen 95
Thin-film imaging: Past, present, prognosis — Seeger 105

Logic design and technology
Design methodology for the S/390 Parallel Enterprise Server G4 microprocessors — Shepard 515

Machine computation and data analysis
NStrace: A bus-driven instruction trace tool for PowerPC microprocessors — Sandon 331

Manufacturing
Manufacturing with DUV lithography — Holmes 7

Masks
Development and application of a new tool for lithographic mask evaluation, the stepper equivalent Aerial Image Measurement System, AIMS — Budd 119
Large-field scanning laser ablation system — Doany 131
Masks for laser ablation technology: New requirements and challenges — Speidell 143
Optical lithography: Introduction — Chiu 3

Mathematical functions and techniques
A study of the representation of fractal curves by L systems and their equivalences — Alfonseca 727
Improving the memory-system performance of sparse-matrix vector multiplication — Toledo 711
Recursion leads to automatic variable blocking for dense linear-algebra algorithms — Gustavson 737

Mathematics
Fast and effective algorithms for graph partitioning and sparse-matrix ordering — Gupta 171

Mathematics (applied)
Automatic selection of high-order transformations in the IBM XL FORTRAN compilers — Sarkar 233
Fast and effective algorithms for graph partitioning and sparse-matrix ordering — Gupta 171

Matrix and network studies
Fast and effective algorithms for graph partitioning and sparse-matrix ordering — Gupta 171

Measurement
Development and application of a new tool for lithographic mask evaluation, the stepper equivalent Aerial Image Measurement System, AIMS — Budd 119
Prefetching and memory system behavior of the SPEC95 benchmark suite — Charney 265

Memory, cache
Prefetching and memory system behavior of the SPEC95 benchmark suite — Charney 265
S/390 Parallel Enterprise Server Generation 3: A balanced system and cache structure — Doettling 405
Shared-cache clusters in a system with a fully shared memory — Mak 429
Understanding some simple processor-performance limits — Emma 215

Memory (computer) design and technology
Improving the memory-system performance of sparse-matrix vector multiplication — Toledo 711

Memory (computer) management
Shared-cache clusters in a system with a fully shared memory — Mak 429

Microcontact printing
Lithography beyond light: Microcontact printing with monolayer resists — Biebuyck 159

Microelectronics
Lithography at a wavelength of 193 nm — Rothschild 49

Microprocessor systems and applications
A high-frequency custom CMOS S/390 microprocessor — Webb 463
A programmer's view of performance monitoring in the PowerPC microprocessor — Levine 345
Advanced microprocessor test strategy and methodology — Huott 611
Circuit design techniques for the high-performance CMOS IBM S/390 Parallel Enterprise Server G4 microprocessor — Sigal 489
CMOS floating-point unit for the S/390 Parallel Enterprise Server G4 — Schwarz 475
Design methodology for the S/390 Parallel Enterprise Server G4 microprocessors — Shepard 515
Dynamic resource management on distributed systems using reconfigurable applications — Moreira 303
Standard-cell-based design methodology for high-performance support chips — Kick 505

Models and modeling
NStrace: A bus-driven instruction trace tool for PowerPC microprocessors — Sandon 331
Simulation/evaluation environment for a VLIW processor architecture — Moreno 287
Understanding some simple processor-performance limits — Emma 215

Multiprocessors
IBM S/390 Parallel Enterprise Servers G3 and G4 — Rao 397

Networks
Optimization of TCP segment size for file transfer — Bournas 357

Operating systems
Performance analysis on a CC-NUMA prototype — Kaeli 205

Operations research
Design of component-supply contract with commitment-revision flexibility — Bassok 693

Optical lithography
Advanced DUV photolithography in a pilot line environment — Ausschnitt 21
Chemical amplification resists: History and development within IBM — Ito 69
Development and application of a new tool for lithographic mask evaluation, the stepper equivalent Aerial Image Measurement System, AIMS — Budd 119
High-numerical-aperture optical designs — Singh 39
Impact of lens aberrations on optical lithography — Brunner 57
Large-field scanning laser ablation system — Doany 131
Laser release process to obtain freestanding multilayer metal–polyimide circuits — Doany 151
Lithography at a wavelength of 193 nm — Rothschild 49
Manufacturing with DUV lithography — Holmes 7
Masks for laser ablation technology: New requirements and challenges — Speidell 143
Negative photoresists for optical lithography — Shaw 81
Optical lithography: Introduction — Chiu 3
Photoresists for 193-nm lithography — Allen 95
Thin-film imaging: Past, present, prognosis — Seeger 105

Optical science and technology
Advanced DUV photolithography in a pilot line environment — Ausschnitt 21
High-numerical-aperture optical designs — Singh 39
Lithography at a wavelength of 193 nm — Rothschild 49
Optical lithography: Introduction — Chiu 3

Optics
High-numerical-aperture optical designs — Singh 39
Impact of lens aberrations on optical lithography — Brunner 57

Optimization
Automatic selection of high-order transformations in the IBM XL FORTRAN compilers — Sarkar 233
Design of component-supply contract with commitment-revision flexibility — Bassok 693
Dynamic resource management on distributed systems using reconfigurable applications — Moreira 303
Optimization of TCP segment size for file transfer — Bournas 357

Parallel processing
Understanding some simple processor-performance limits — Emma 215

Performance analysis
A programmer's view of performance monitoring in the PowerPC microprocessor — Levine 345
Automatic selection of high-order transformations in the IBM XL FORTRAN compilers — Sarkar 233
Dynamic resource management on distributed systems using reconfigurable applications — Moreira 303
NStrace: A bus-driven instruction trace tool for PowerPC microprocessors — Sandon 331
Optimization of TCP segment size for file transfer — Bournas 357
Performance analysis on a CC-NUMA prototype — Kaeli 205
Prefetching and memory system behavior of the SPEC95 benchmark suite — Charney 265

Simulation/evaluation environment for a VLIW processor architecture — Moreno 287
Understanding some simple processor-performance limits — Emma 215

Photo-processes
Chemical amplification resists: History and development within IBM — Ito 69

Photoresists
Chemical amplification resists: History and development within IBM — Ito 69
Lithography at a wavelength of 193 nm — Rothschild 49
Negative photoresists for optical lithography — Shaw 81
Optical lithography: Introduction — Chiu 3
Photoresists for 193-nm lithography — Allen 95
Thin-film imaging: Past, present, prognosis — Seeger 105

Printing technology
An overview of impact printing — Zable 651
Print-quality enhancement in electrophotographic printers — Stanich 669
Use of the transform exit sequence in printing and as a framework for the solution of complex problems — Mastie 679

Printing, impact
An overview of impact printing — Zable 651

Process control and development
Advanced DUV photolithography in a pilot line environment — Ausschnitt 21
Laser release process to obtain freestanding multilayer metal–polyimide circuits — Doany 151
Manufacturing with DUV lithography — Holmes 7
Negative photoresists for optical lithography — Shaw 81

Reduced-instruction-set computers (RISC)
Improving the memory-system performance of sparse-matrix vector multiplication — Toledo 711

Self-assembled monolayer (SAM)
Lithography beyond light: Microcontact printing with monolayer resists — Biebuyck 159

Simulation
Designer-level verification using TIMEDIAG/GENRAND — Wile 581
Formal verification made easy — Schlipf 567
Functional verification of the CMOS S/390 Parallel Enterprise Server G4 system — Wile 549
Impact of lens aberrations on optical lithography — Brunner 57
NStrace: A bus-driven instruction trace tool for PowerPC microprocessors — Sandon 331
Run-control and service element code simulation for the S/390 microprocessor — Koerner 577
SimAPI—A common programming interface for simulation — Hallock 601
Simulation/evaluation environment for a VLIW processor architecture — Moreno 287
The role of two-cycle simulation in the S/390 verification process — Van Huben 593

Surface science
Lithography beyond light: Microcontact printing with monolayer resists — Biebuyck 159

Testing
Advanced microprocessor test strategy and methodology — Huott 611

Testing, circuit
Advanced microprocessor test strategy and methodology — Huott 611

Testing, module
Advanced microprocessor test strategy and methodology — Huott 611
